(a) Registered Candidate Pair (Candidate #001: Pixel NCC = 1.000, Gradient NCC = 1.000, Overlap = 64%)

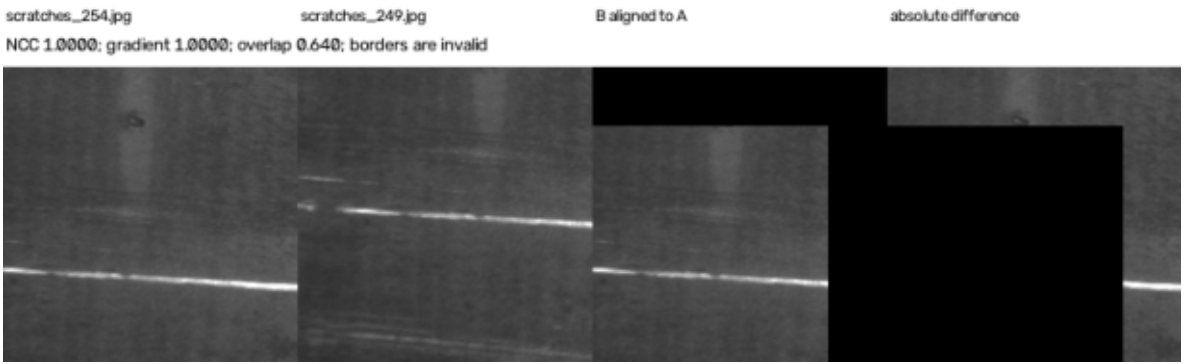

Image-Level Random Splitting

- Independent per-image allocation
- Candidate partners may cross partitions
- Frame A ∈ Train, Frame B ∈ Test
- Correlation is a potential score confounder

Our MIP Partition (neu_v5_frozen)

- 223 candidate edges grouped into components
- MIP confines each component to one partition
- Preserves balanced 79.8% / 10.0% / 10.0% ratio
- Zero cross-split edges in this candidate set
